Innovation Center for Biomedical Informatics

Machine Learning Special Interest Working Group

"Supporting Clinical and Translational Science with Informatics, IT and Data Science"

We are excited to announce the formation a new special interest working group focused on exploring the application of cutting edge machine learning methods to biomedical and health care datasets. Monthly meetings will explore current applications of machine learning both at Georgetown University, as well as the broader health informatics community. With a primary aim to support the application and understanding of machine learning toolsets, we will also work to identify meaningful research questions and available datasets to motivate novel, multidisciplinary research projects.

Participants with a range of experience are welcome to attend.

If interested, please contact Dr. Matthew McCoy (mdm299@georgetown.edu) for further details.
SIG meetings will start in September, 2018.
