

MHRI-GHUCCTS Monthly Statistical Seminar Series 2023-2024

Friday, October 20, 2023
12 - 1 PM EST | Online

Generalized Linear Models

This seminar will look at statistical analyses where the outcome variable is categorical: binary, ordinal or multinomial. These outcomes are typically analyzed by logistic regression. In addition, we will discuss analyses for count data (e.g., hospital ICU infections per month). As with linear regression, these analyses included assumptions about the relationships among variables – and we will look at the impact of violation of these assumptions.
