

The Georgetown-Howard Universities Center for Clinical & Translational Science Mentored Career Development Core

Announces:

2023 KL2 Scholars

The Georgetown-Howard Universities Center for Clinical and Translational Science (GHUCCTS) is pleased to announce the appointment of **Erica E. Coates, PhD as the 1st KL2 Scholar selected in our highly-competitive 2023 cycle.** This new awardee, her research projects, and training plan are emblematic of our program objectives in that they pair a highly-promising junior faculty scholar-trainee with a mentor team that includes senior colleagues from across disciplines, departments, campuses, and institutions to pursue research that depends upon collaborations and methods from outside the scholars' discipline, local research environment, or past experiences.

The GHUCCTS KL2 program is built on the original National Institutes of Health "roadmap" K12 Clinical and Translational Research Scholars program and is similar to individual K-series awards, by providing up to three years of protected time and research support, focused on developing early-career faculty investigators through a multidisciplinary-mentored research experience to enable their success as independent, extramurally-funded investigators, preferably in programs of multidisciplinary, collaborative translational team science.

Erica E. Coates, PhD is an Assistant Professor in the Department of Psychiatry at Georgetown University Medical Center. As a KL2 scholar, she will complete a strengths-based, translational research project, Racial Socialization and Racial Identity as Moderators in the Relationship Between Parents' and Children's Exposure to Racism and Children's Mental Health. She will conduct a longitudinal study on sociocultural stressors and protective factors for Black families with young children, which will inform a culturally adapted model of parent-child interaction therapy that incorporates racial socialization, on which she will gather preliminary acceptability and feasibility data. These data will be used to refine her culturally adapted intervention for Black families with young children, Cultivating Optimal African American Child Health (COAACH). She is co-mentored by Dr. Celene Domitrovich, Associate Professor in the Department of Psychiatry at Georgetown University Medical Center, and Dr. Velma McBride Murry, Professor in the Departments of Health Policy & Human & Organizational Development at Vanderbilt University.

Dr. Coates will join our continuing KL2 Scholars including:

Amanda Blair Spence, MD an Assistant Professor of Medicine at Georgetown who seeks to understand the contributions of biology, behavior, and social determinants to the development and manifestation of comorbidities in persons living with HIV to then inform interventions to improve health outcomes. She is mentored by Drs. Seble Kassaye, from the Division of Infectious Disease, and Lucile

Adams-Campbell, from the Lombardi Comprehensive Cancer Center, both at Georgetown University Medical Center.

Christina Marea, PhD, MA, FACNM, a certified nurse midwife and Assistant Professor in the Georgetown University School of Nursing (GUSON). Dr. Marea is investigating the feasibility, acceptability and preliminary effectiveness of a 12-month model of postpartum care to address the negative health effects of structural racism for birthing people in Washington DC. Dr. Marea's mentoring team includes Dr. Alejandra Hurtado de Mendoza, a former KL2 scholar herself, Dr Kristi Graves, and Dr. Arnold Potosky, all members of the Lombardi Comprehensive Cancer Center at Georgetown University Medical Center.

Maurice B. Fluitt, PhD, an Assistant Professor at the Howard University College of Medicine . Dr. Fluitt is investigating the use of microRNAs as early predictive biomarkers and mediators of autophagic response in diabetic kidney disease. Dr. Fluitt's mentoring team includes Dr. Ben Afzali from the Immunoregulation Section of the Kidney Disease Branch at the NIDDK, Drs. Gail Nunlee-Bland and Hassan Ashktorab from the Department of Medicine at Howard University, Dr. Carolyn Ecelbarger from the Department of Medicine at Georgetown University, and Dr. Alison Kriegel from the Department of Physiology at the Medical College of Wisconsin.

Roxanne Mirabal-Beltran, PhD RN, an Assistant Professor in the Department of Professional Nursing Practice at the Georgetown University School of Nursing & Health Studies. Dr. Mirabal-Beltran is investigating the effect of an educational intervention on maternal healthcare knowledge of women living in DC's Ward 5 and the feasibility of having the intervention delivered in community laundromats. She is mentored by Drs. Laura Linnan, from the Department of Health Behavior at the Gillings School of Global Public Health at the University of North Carolina at Chapel Hill, Linda Gallo, from the Department of Psychology at San Diego State University and Alejandra Hurtado de Mendoza, at Georgetown.

Haiyan He, PhD, an Assistant Professor in the Department of Biology at Georgetown University is investigating the *in vivo* function of a newly discovered neuronal membrane-associated proteasome as a fast-homeostatic mechanism and its potential link to neurodegenerative diseases. She is mentored by Dr. Seth Margolis from the Departments of Biological Chemistry and Neuroscience at Johns Hopkins University School of Medicine with co-mentorship by Drs. Dan Pak, Brent Harris, and Kathy Maguire-Zeiss, at Georgetown University Medical Center.

Please join us in congratulating our new and continuing KL2 scholar.

Jason G. Umans, MD, PhD
Associate Professor and KL2
Program Director

Marjorie C. Gondré-Lewis, PhD
Professor and KL2 Associate
Program Director

Kathryn Sandberg, PhD
Professor and Associate Program
Director
